

# Technical Seminar on Current Practice and Future Trend of Contract Management, Construction Law and Alternative Dispute Resolution

The challenging environment in managing engineering contracts inevitably brings about a wide range of contractual and legal issues which have been arousing interest from all spheres of the construction industry including young engineers, solicitors and arbitrators.

The objectives of this seminar are to provide a forum for participants to recognise basic structure of an engineering contract, current contract administration practice and related law.

The seminar also aims to equip the participants with up-to-date knowledge on the future trend of contract management. Hotly debated topics, including better claim management, alternative dispute resolution and evolution of new contract types will be addressed during the event.
